

The Course Planner App

The Course Planner App is a mockup-like possible use case for the FHP Course API we've built during the project week in 2016/17 (winter semester).

The App Mockup

The app mockup visually describes a possible app-wokrflow how to solve the main and hard problems in our studenhood – the module and course planning.

This mockup is not a complete app-screen-workflow, so feel free to articipate on this project!

Screen Informations

iPhone 6/6s (750x1334) RGB Color Space Screens: 6

Fonts: SF UI Test SF UI Display

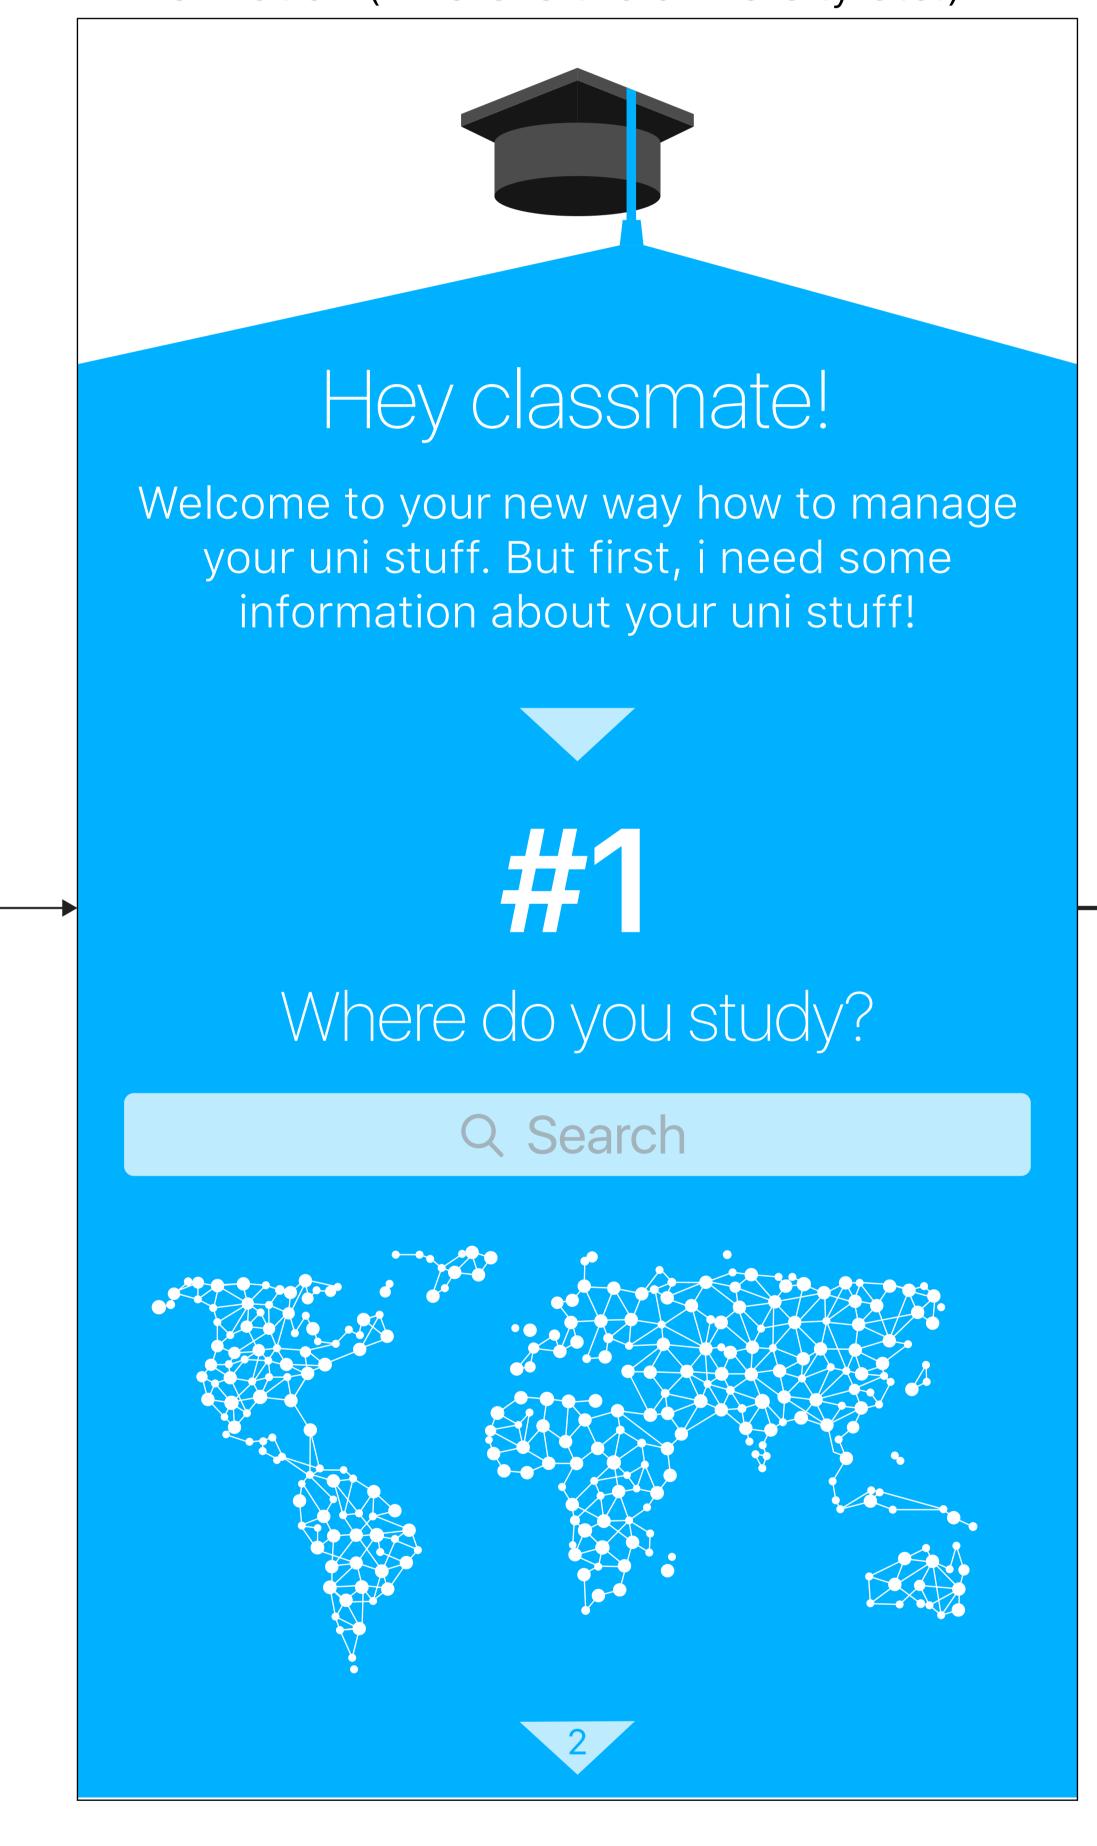

Splash Screen

– possible splash screen

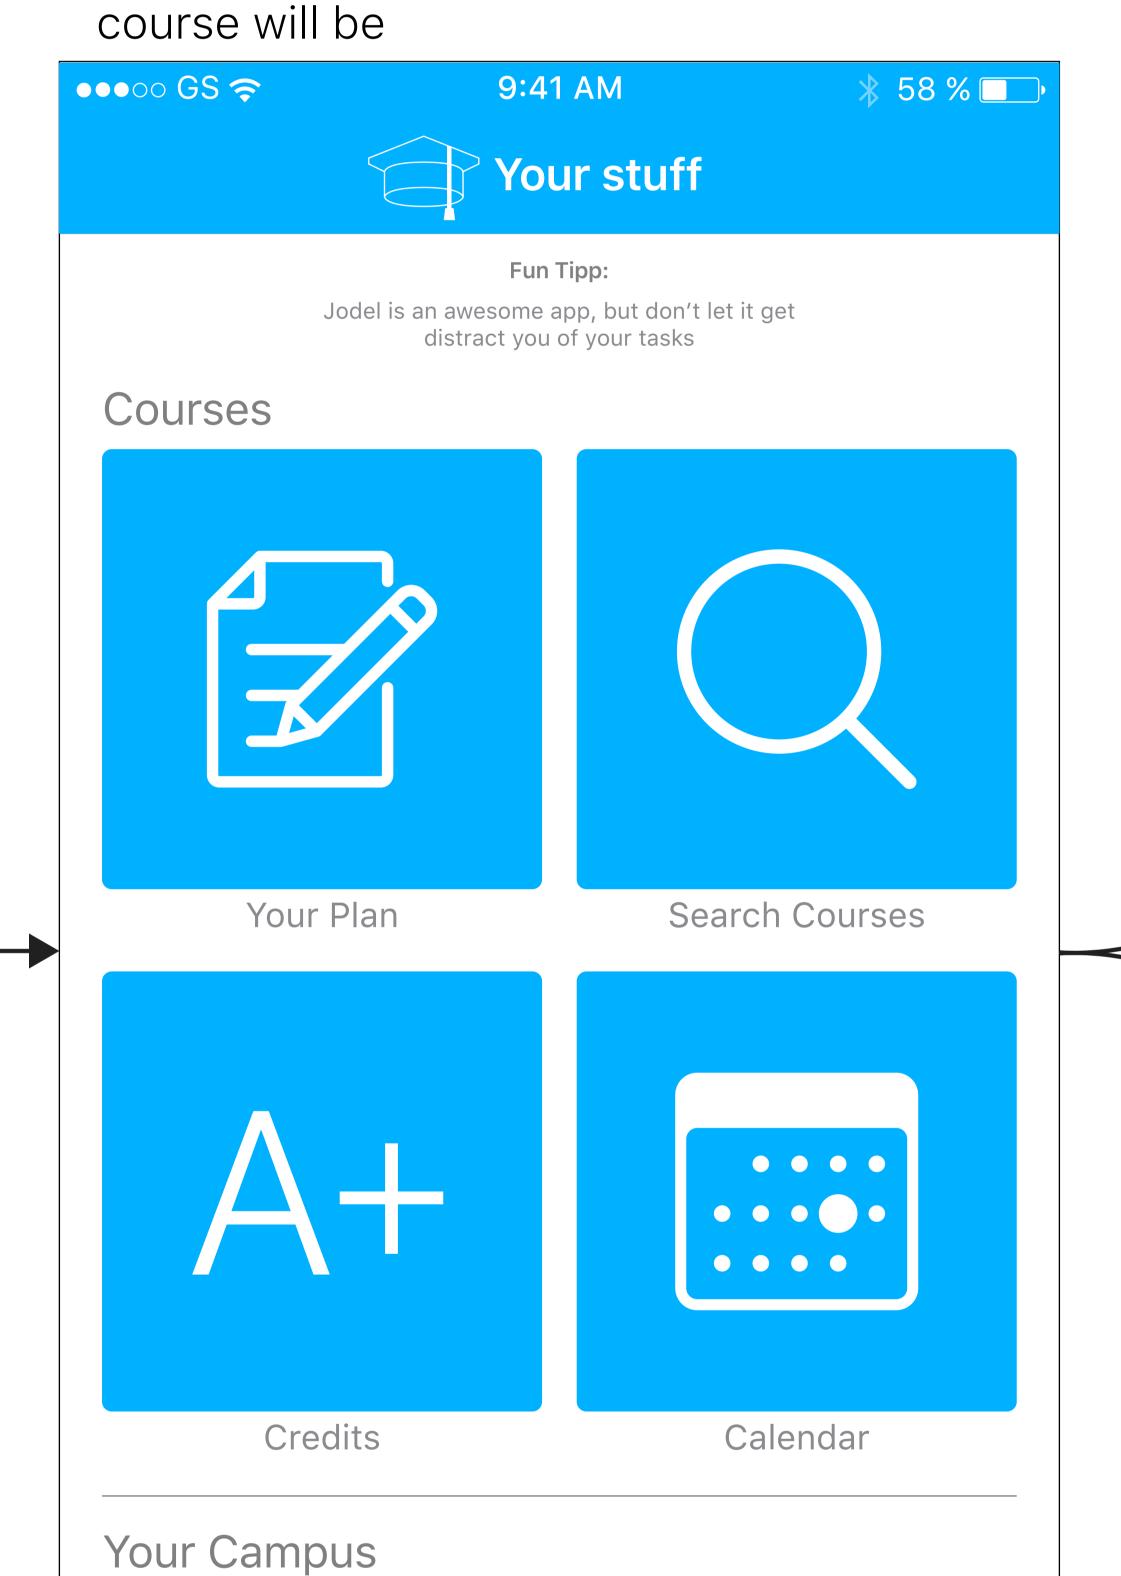

Setup Screen

 possible setup screen to set the student information (where is the university etc.)

Main Landing Screen

- shows all relevant functions such as:
 edit the semesters and assigned courses
 search all courses and block seminars
- show your earned ects
 show your weekly calendar with your assigned courses
- don't know where to go to the course room?
 the campus map shows you where the next

Semester / Course Managing

courses

with all relevant data (not shown here)

in fact that the FHP Course API knows

from the online database it could detect

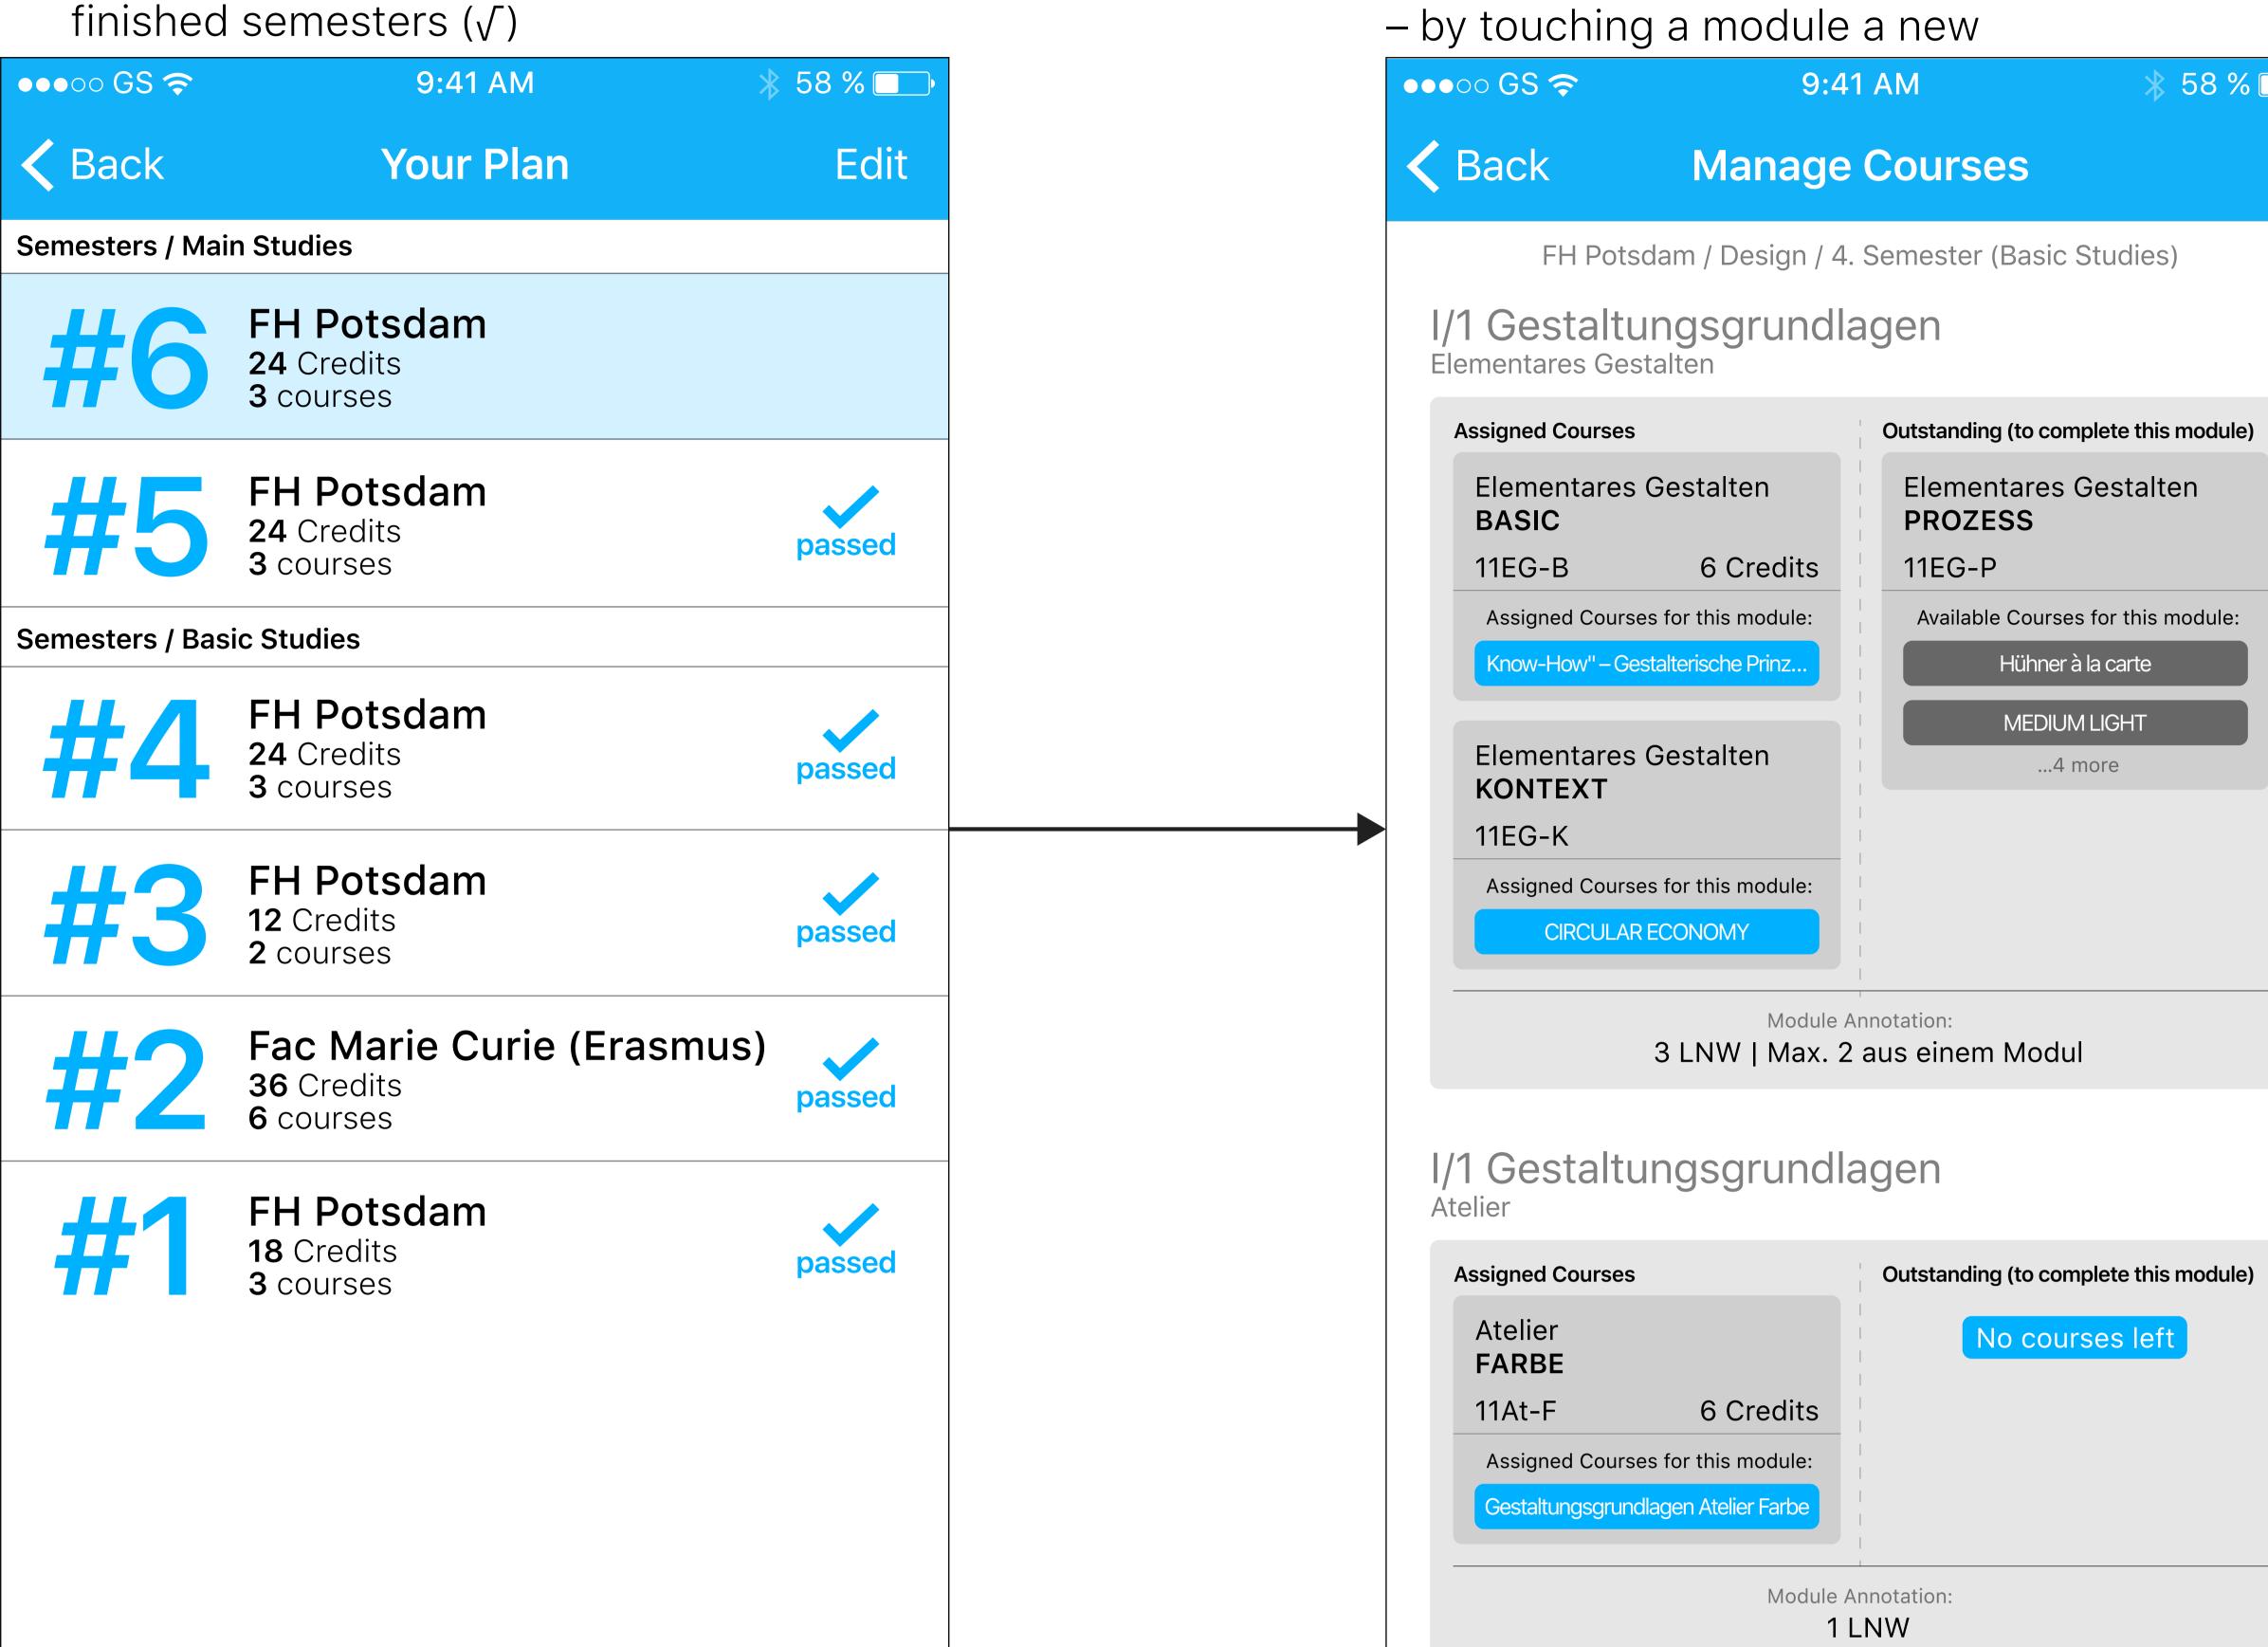

– then you can touch a semester to edit the

the start/end dates of the current semester

- edit your semesters and course assignment
 in the first step you have to create a semester
 Wanage Courses Of A Semester
 with the information about you the app knows
 - your module plan and shows you which modules you have to assign next

1/2 Eachariantiarung

- plan is seperated in different modules
 a module box shows the assigned courses and the possible courses you have to assign
- and the possible courses you have for a complete module
